EXPERIENCE

CHILD'S PLAY WITH A DIFFERENCE.

In Germany, we develop and produce imaginative playground equipment for the whole world. We, a team of 85 enthusiastic product designers and engineers, fitters and carpenters, technical and commercial employees, enjoy developing and building small, well-thought-out playground equipment as much as we do designing, producing and installing a large leisure park or indoor facility.

Good playground equipment is not only fun, it also promotes the healthy development of children and young people – a quality feature that Kinderland has always emphasised when developing new products. Our motto is: Child's play with a difference.

WHAT MAKES A GOOD PLAYGROUND?

Every child knows that: it's a place where you can try things out, where you meet your friends and where you always discover and experience new things together. As an experienced playground designer and innovative manufacturer of playground equipment, we know: That's exactly why a good playground must have further features, too. We will show you what these are.

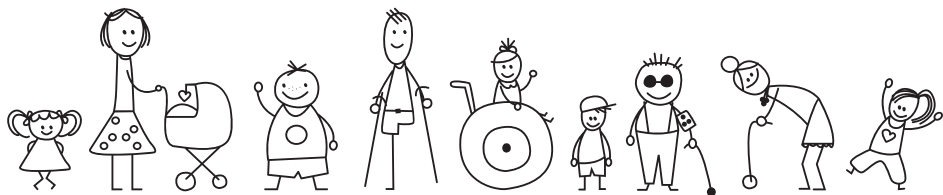

Playground for everyone

Kinderland is considered throughout Europe as one of the pioneers in the development, planning and implementation of integrative, barrier-free playground equipment and play spaces that are equally accessible to children with and without disabilities as well as people of all generations.

High play value

Good playground equipment is not only fun, it also promotes the healthy development of children and young people – a quality feature that Kinderland has always emphasised when developing new products.

HELLO

Unique variety of materials

We are the market leader when it comes to the mix of materials used. In the interplay of Robinia, Douglas fir and oak, steel and stainless steel, natural stone and concrete, we create unique, long-lasting playgrounds.

Quality made in Germany

Customers all over the world value the long-lasting, high quality made in Germany. For instance, we use particularly stable nets. The ESF ring nut developed by Kinderland for net connections also takes account of our high safety standards.
